

Interesting Facts as to the Habits of the Japanese.

THE recently adopted regulation of the State Department requiring Consular officials abroad to report upon the trade, manufactures and varied industries of the places to which they are accredited has resulted in the compilation of some interesting information. The following paragraphs are from the report on Japan:

It is now nearly a quarter of a century since Perry opened the sealed gateways of Japan to the commerce and travel of the world. The unique civilization of an island empire, with an area of 150,000 square miles and more than 35,000,000 of people, was then first presented to modern times for study and investigation. Since that time libraries of books and pamphlets and volumes of letters have been written upon every phase of that civilization, except the status and condition of the laborer. Of the importance and power of 35,000,000 of people as added factors in the products of the world there can be no question.

All buildings, or nearly all, are one-story and, compared to those of America and Europe, small. But the reader must bear in mind that the requirements of this Oriental civilization are less than with us. A laborer's house here will at most have no more than four little rooms. Generally there is one main room, which serves as a sitting, dining and sleeping room, and in addition a small nook for cooking and another for bathing. That the uses of one room for the purposes of eating, sitting and sleeping may be understood, it should be explained that the rooms are covered with clean soft mats, upon which no boots or shoes ever tread. When meals are served small tables not more than one foot high are used, and the family sit on the floor like tailors on their benches. When the meal is finished the table is removed and the room is ready for a sitting-room, the mats serving as seats. At night cotton comforters are brought from a small clothes-press and spread on the mats, and a sleeping chamber. Thus, much of the room required by a laborer of our Western civilization is saved. A Japanese laborer's house with three rooms can be built for from 25 to 200 yen. And the furniture, including matting and sliding partitions, will not exceed 50 yen. A yen is about equal to our dollar. The house, by reason of non-use by the people of boots and shoes, is neat and clean. The bath, found in almost every laborer's house, is in daily use, and cheap and small as the house is it is comfortable. None of the houses are built with a view to ventilation or warmth, the partitions and sides being of paper, protected in cold weather or storms by strong wooden shutters. The vast majority of the houses are thatched, and therefore stove-pipes and chimneys are impossible. In fact, there are no stoves or grates in Japan. In villages and towns the house is warmed, if at all, by a small fire-box filled with charcoal, but more generally by a square zinc or copper-lined fire-place, sunk in the middle of the floor, in which wood is burned, the smoke from which arises and escapes through a hole in the roof. But little heat is generated in this way, and much discomfort from the smoke is experienced, and diseases of the eye are prevalent. As a rule the principal protection from cold is by additional padded clothing. The laborer, however, suffers in the three winter months, when, although in many parts of the Empire the thermometer does not mark very low, the cold storms of snow and rain are exceedingly uncomfortable. The drainage from sinks and cess-pools in the vicinity of tenements is as a rule extremely defective, and is doubtless a powerful agent in producing epidemic diseases.

The houses of cities seem to be less crowded than those of the poorer rural districts. All labor on the farm is, to the present time, mere handwork. A plow is seldom seen. Sometimes in the lowland rice-fields an implement five feet in length, with a wooden cross-piece and depending iron teeth twenty inches in length set four or five inches apart, is used with a horse as a pulverizer of the soil, after the latter has been thoroughly dug up and worked over with a mattock. Ninety-nine per cent., however, of all labor is still manual. In 1878 the number of farmers out of a population of 35,000,000 was something over 15,500,000, of which over 7,000,000 were women; but as a large number of these latter, including the old and young, are engaged in household duties, spinning, weaving, making clothing, etc., there were probably not more than 2,000,000 or 3,000,000 women employed in field work. The area of land in actual cultivation in the whole empire in 1875 was about 12,000,000 acres, so that to the actual farming population there were only three-quarters of an acre per head. The tillage is of the most thorough order. The crops are invariably raised each year, so that the producing capacity of the area cultivated is double that of the number of acres named. The wages of an able-bodied farm hand are about \$35 per year with board, and without board \$50. Per day, with board, it will not average more than fifteen to twenty cents. Female labor is much cheaper. To do work in a house or on a farm, stout, healthy women are employed at from \$8 to \$10 a year with food, and without food from \$25 to \$30, and by the day at from ten to fifteen cents a day. The number of hours of labor will not average more than nine, and probably not more than eight. — *Washington Cor. Cleveland Leader.*

Gems.

JEWELS in heraldry represent colors. The topaz represents or (gold) or the planet Sol. The pearl or crystal represents argent (silver) or the planet Luna. The ruby represents gules (red) or the planet Mars. The sapphire represents azure (blue) or the planet Jupiter. The diamond represents sable (black) or the planet Saturn. The emerald represents vert (green) or the planet Venus. The amethyst represents purpure (purple) or the planet Mercury. And now that you have had a glimpse of jewels, I think it is time to look up the laboring classes of Switzerland are out of work, and are much distressed.

HOME AND FARM.

PARAFFINE OIL on whetstones is superior to any other liquid, and will keep the stone in better order.

In some recent experiments at Paris the fumes of burning coffee were shown to have a disinfecting power quite remarkable.

CHILDREN'S PLUM PUDDING.—Half-pound raisins, half-pound chopped currants, half-pound suet, one pound bread soaked in milk, beaten smooth, quarter pound flour, two ounces candied peel, half-pound sugar, little spice, pinch salt; boil six hours or less, according to size.

DRESSING FOR ROAST TURKEY.—Two onions, five ounces of soaked and squeezed bread, eight or ten sage leaves, an ounce of butter, one egg, a small piece of pork minced and pepper and salt to taste. Mince the onions and fry them before adding to the other ingredients. Some chopped celery is always a good addition.

CORN-BREAD.—Mix together half a pound each of sugar and prepared flour, one and a half pounds of Indian-meal, two ounces of butter, melted, four eggs, and three pints of milk; put the batter into a hot buttered pan, and bake it half an hour in a quick oven, but do not burn it. If prepared flour is not on hand use the ordinary kind, either with baking-powder or cream of tartar and soda.

TO REPAIR CRACKED HOOF.—Cracked hoof may be cured by cleaning out the crack and filling it with gutta percha dissolved in naphtha or benzine. Then secure the edges of the crack by clamps made of pieces of horse-shoe nail hooked into the hoof on each side of the crack, by which it is prevented from opening. Then burn the hoof a little at the upper end of the crack and across it to prevent the split from extending upward. — *N. Y. Times.*

KEEPING PLANTS.—When frost comes and you are afraid that the fire may get low, and your plants get nipped, just get a lantern and some good oil, fix your lantern nicely, and it will burn all night, and by placing it under your flower-shelf you will be pleased to find how safely your plants get along. I have tried this for some years, and find that the heat from a common railroad lantern will protect quite a quantity of plants if the lantern is placed among or under the plants. — *Inter-Ocean.*

POTATOES in the raw state ought never to be given to any animal, with the exception of sheep and geese. It is said a goose will thrive better, and the flesh will be more gratefully flavored, upon raw potatoes sliced than upon any other article, while sheep—and old sheep particularly—will more speedily thrive on raw potatoes than on turnips; but, especially in the beginning, raw potatoes will scour cattle and horses, and not unfrequently cause death, while there is no danger from either boiled or steamed potatoes. — *Stockman.*

A CHEAP AND EFFECTUAL DISINFECTANT.—Half a drachm of nitrate of lead dissolved in a pint of boiling water; this solution to be poured into a bucketful of cold water, in which are dissolved two drachms of common salt. Some of this solution occasionally poured into the sinks and vaults about the premises, will soon purify the place from any deleterious emanations; and cloths dipped in the solution and wrung out and hung on lines about the rooms will keep the atmosphere of even a hospital ward sweet and healthy. Its action on clothes or furniture is perfectly harmless. — *Boston Transcript.*

A USEFUL TABLE.—The following table will help farmers to be accurate in measuring things: 5 yards wide by 368 yards long, 1 acre; 10 yards wide by 184 yards long, 1 acre; 20 yards wide by 92 yards long, 1 acre;
